

Metacognition

Thinking about thinking
Planning, Monitoring, Assessing
Teaching students how to learn more effectively

Learning Intentions

1. To understand the importance of metacognition and cognitive load for teaching practice and student performance
2. To establish a shared approach to helping students learn more effectively, including shared language and shared practices

Metacognition

Thinking about your thinking.

Learning about your learning.

Evaluating your progress.

Critical self-analysis.

4

Learning and memory process

The learning and memory process has three essential stages:

1. Encoding: the initial learning of information
2. Storage: maintaining information over time
3. Retrieval: the ability to access information when needed

Learning and memory process

There are three main forms of memory:

1. Sensory memory
 2. Working Memory (WM): stored very briefly, only seconds, and can only hold around 7 (+/-2) items of information at once.
 3. Long Term Memory (LTM): stored for long time and can be in large segments
- WM is mostly stored and retrieved sequentially
 - LTM is mostly stored and retrieved by association

- ANC
- AA

- CNN
- FBI
- CBS
- CIA
- NCAA

The background is a solid orange color. On the right side, there are several dark brown gears of different sizes, some overlapping. A bright yellow square is positioned in the upper right corner.

What is the significance of this to your students?

Facts matter. Information is important.

You need to commit critical information to your long-term memory to be able to perform better cognitively.

Teachers must help students store information in the LTM to manage cognitive load.

COGNITIVE LOAD THEORY

a short guide for teachers

by @ImpactWales

Cognitive Load

- * **Intrinsic** - the difficulty of the material, influenced by prior knowledge.
- * **Extraneous** - load generated by way material is presented
- * **Germane** - the work put into creating a permanent store of knowledge or schema

Cognitive overload occurs when cognitive load outweighs processing capacity.

Reduce Cognitive Load for learners →

- ① Use deliberate practice to shift some of the knowledge to long term memory & free up space in working memory.
- ② Present new material effectively to reduce load, e.g. dual coding - use text & pictures to illustrate.

Cognitive Load

Processing Capacity

Intrinsic cognitive load is reduced as some of the knowledge has been shifted to long term memory

Extraneous is reduced as method of presentation is improved e.g. through dual coding

Germane stays the same

Cognitive balance is when there is sufficient processing capacity available for the required load.

Split-Attention Effect and Extraneous Load

“... if a geometry statement mentions Angle ABC, learners have to note the angle and find it on the diagram. Until the statement and the diagram have been mentally integrated, neither can make any sense. This activity has to occur in limited working memory and the sole reason it has to occur is because of the conventional format of geometry worked examples. If instead, the statements are placed on the diagram or had arrows indicating the relations between each statement and the diagram, the worked example is physically integrated and working memory resources do not have to be expended to integrate the two sources of information. Extraneous cognitive load is reduced and learning is facilitated.” (Sweller)

This principle applies to the presentation of all information, as demonstrated by research of the split-attention effect in physics, music and computer education.

WHAT ARE THE DIFFERENT types of cognitive load?

		
Intrinsic Load	Extraneous Load	Germane Load
Source The inherent complexity of the material and the prior knowledge of the learner	Source Poorly designed instruction that does not facilitate schema construction and automation	Source Well designed instruction that directly facilitates schema construction and automation
Effect on learning Necessary to learning (but potentially harmful if too high, because it can cause cognitive overload)	Effect on learning Harmful because it does not contribute to learning	Effect on learning Helpful because it directly contributes to learning

Importance of instruction and presentation to cognitive load

“A long, complex oral statement, because it is transient, will increase rather than decrease working memory load compared to a written statement, leading to the transient information effect and a reversal of the modality effect”

Sweller - Story of a Research Program

Helping your gifted learner

Importance of instruction and presentation to cognitive load

“Most people assume that providing learners with additional information is at worst, harmless and might be beneficial. Redundancy is anything but harmless. Providing unnecessary information can be a major reason for instructional failure.”

Sweller - Story of a Research Program

Managing cognitive load

Effective Instruction

- Paramount that instructional procedure reduces extraneous working memory load.
- Integrate text and diagrams where possible
- Don't deliver new and complex ideas in a long, exclusively oral form (new and complex ideas should instead be delivered via written text so that students have a reference)
- Integrate speech with diagrams
 - short & simple speech only (not long and complex - see above)
 - use markers on diagrams (e.g. directional arrows)

Dylan Wiliam
@dylanwiliam

I've come to the conclusion Sweller's Cognitive Load Theory is the single most important thing for teachers to know bit.ly/2kouLOq

Managing cognitive load

Better Instruction

- Students often do not know which parts of the teaching are important - teachers often assume that they do
- Teachers therefore need to be very explicit (e.g. discuss “big takeaways” at the end of the lesson)
- Teachers are subject experts, students are subject novices
- Teachers tend to overestimate student knowledge (“the curse of knowledge”)
- Teachers therefore need to continually frame the teaching from the perspective of the novice
- This involves practices like scaffolding and chunking

So, how do you remember
and what should you
remember?

Memory retention

- Memories fade very quickly, especially when the information is not accessed
- This is a form of memory failure known as transience
- It is represented by the “forgetting curve” devised by Ebbinghaus

THE FORGETTING CURVE

Memory retention

- The rate of decline in memory retention is able to be slowed
- The forgetting curve is flattened through active strategies such as review or revision, especially spaced, or memory strategies such as mnemonics, or elaboration

Retrieval Practices

22

Tests

Worksheets

Revision activities

Retrieval Practices

What is it?

- Retrieval practice is the process of recalling past learning
- Sometimes called guided practice, explicit practice, mass practice, distributed practice, spaced practice and over-learning.
- Evidence-based
- Spaced = intervals

Overcoming the Curve

Retrieval Practices

Low stakes testing in the classroom

- Informal assessment. No marks = less anxiety
- Assessment as learning (as well as assessment of learning)
- Proven - “testing effect”
- Paper or digital quiz
- Less about what you use (the activity), but how you use it (the conditions)
- Enforce examination conditions - independently completed with no reference to stimulus (e.g. notes, textbooks)
- Spaced apart - revisit previous learning at intervals

Retrieval Practices Other Activities

- Brain dumps - ask students to write everything they can remember about a topic or issue. Again, under exam conditions
- Entry/Exit Tickets (revision of past lessons)
- Question of the day
- Flashcards - Quizlet
- Quizzes - Kahoot

Retrieval Practice

Multiple Choice Questions

Mini White Boards

Self - quizzing

Also bad

ORIGINS/FEATURES

CULTURAL

Culture is a system of shared beliefs, values and customs that members of the group use to cope with their world and one another. It is passed down from generation to generation through learning.

- concerned with the traditions, way of life, values, artefacts and language of the country

- focus on minority
- none to no political agenda

e.g. Sudi utomo (Indonesia)

- concerned about moral and political decline of Java due to Dutch colonialism
- sought to educate peasants to rediscover their culture and historical roots

e.g. Propaganda Movement (Philippines)

- earliest movement of cultural nationalism with its emphasis on Filipino literature and the arts, pre-Spanish history and self-conscious effort to seek out national personalities through newspaper publication

RELIGIOUS

Religion is a system of beliefs based on humanity's attempt to explain the universe and natural phenomena. They to some extent (a) require faith (b) seek to influence and organise the thoughts and actions of their adherents

- concerned with indigenous religious practices, rituals and customs
- none to no political agenda

- can be started by religious revivalism in other parts of the world

e.g. Young Men's Buddhist Association (YMBA) (Burma)

- sought to reform and modernise Buddhist beliefs and practices
- Buddhism was unprepared for intellectual issues associated with modernisation and foreign cultural presence

e.g. Muhammadiyah (Indonesia)

- influenced by reform Islam in the Middle East
- aimed to modernise Islam by attacking heterodox religious practices and institutionalisation

TRADITIONAL

- basic aim of restoring monarchy or traditional system of power, way of life
- aimed to remove foreign presence, influence, ideas or systems
- no progressive social reform to accompany it

e.g. Dawa San Bheksan (Burma)

- revived traditional, religious and political symbols of Burma and aimed to restore

the monarchy.

e.g. Sarekat Islam (Indonesia)

- followed a doctrine that rejected the monarchy and village structures of the traditional forms of authority
- refused to pay taxes or attend public schools

STRONG PERSONALITIES

- charismatic leaders with good oratorical skills are essential for mass support for the organisation

- provided clear leadership in methods and organization

- often times western educated

- unifying force for various nationalist groups within the

e.g. Sukarno from the Indonesian Nationalist Party (PNI)

e.g. Tjiptowidjanto from Sarekat Islam (SI)

IDEOLOGICAL

- provided organization, structure, methods and aims of movement

e.g. Communism

- provided explanation of current situation and hope for even better future
- aimed to address rural grievances and large-scale revolts in

- formulated ideas of a nation better than religious counterparts

e.g. Indonesian Communist Party (ICP) (Indonesia)

- planned to overthrow French imperialism to make Indonesia indepen-

- planned to confiscate plantations belonging to imperialism and distribute land to poor peasants

e.g. Doharna Movement (Burma)

- inspired by socialism and Marxism

MODERN - MODERATE

- modern ideas such as nationalism, socialism, money economy, technology

- moderate means willing to negotiate, accepts a slower pace of progress towards independence

e.g. Sarekat Islam (Indonesia)

- founded on Muslim principles but later included liberals

- worked with Dutch government to protect economic interest of Muslims

e.g. Indonesian Nationalist Party (PNI)

MODERN - RADICAL

- radical means willingness to use violent means, or wanting rapid and extreme changes

Retrieval Practices Homework

- Less emphasis less effective practices such as re-writing notes, re-reading the textbook and highlighting readings
- More emphasis on more effective practices such as tests and practice questions - anything that involves retrieving their learning

Retrieval Practices

Interleaving

- Block or massed practice involves applying the same concepts (e.g. trigonometric formulas)
- Interleaving = mixed questioning (multiple topics)
- Highly applicable to maths
- HW sessions for students should utilise interleaving, either within or between subjects - diversified study = better retrieval practice

Memory Strategies

36

Mnemonics

Mnemosyne
Ancient Greek goddess of memory

Memory Strategies

Mnemonic

- Loci
- Chunking
- Acronyms and initialisms
- Rhymes
- Music (auditory)
- Keyword

Memory Strategies

Mnemonic - loci

- Method of loci
- Loci means place or location
- Otherwise known as “memory palace” - commonly involves using a home and its contents
- Images relate to places to make them more memorable

wiki How to Build a Memory Palace

Memory Strategies

Mnemonic - chunking

- Grouping individual items of information according to a system
 - Hierarchical
 - Functional

e.g. the number 1, 9, 6, 1 may be easier to remember as the year 1961

Memory Strategies

Mnemonic - acronyms and initialisms

- NESW
 - Never Eat Soggy Weetbix (cardinal points)
- BEESTOP (HSC Geography)
 - Biological
 - Ecological
 - Economic
 - Sociological
 - Technological
 - Organisational
 - Political

Memory Strategies

Mnemonic - rhymes

- Months of the year rhyme - “Thirty Days Hath September”
- Grammar rules - “i before e, except after c”

Memory Strategies

Mnemonic - music

- Alphabet song - Twinkle, Twinkle Little Star

Memory Strategies

Mnemonic - keyword

- “keyword mnemonic” is a memory-enhancing technique that incorporates identification of a keyword and the use of imagery to create a strong retrieval route
- Very effective for learning foreign language vocabulary

Keyword Mnemonic Strategy: Foreign Language Vocabulary Learning

- Identify a familiar word (the keyword) within a target foreign word
- Create an interactive image between the keyword and the English translation of the foreign word.
- For example, a learner may see the Lithuanian word, *burna*, meaning mouth, identify an English keyword, *burn*, and then create an image of burning her mouth.
- Later, when the learner sees the word *burna*, she would identify the keyword, burn, recall the image she created, and reach the English translation of mouth
